DUCK CREEK.

The progress that is being made on the various properties in the Duck Creek mining district is surprising to those who have visited the district during the last few days.

Superintendent Fred Vick, who came here but a short time ago to take charge of the Lead King Mining and Milling Company's property, has made remarkable progress in the development and improvement of the property since he took hold.

At present no miners are at work in the Morning Star shaft, more familiarly known as the Lead King shaft. There are now fifteen tons of ore sacked in the main chamber of the shaft, awaiting the arrival of sacks. As soon as the sacks arrive this will be transported to the cars.

A new gallows frame will be built at the Morning Star as soon as other improvements which are under way are completed.

A force of men is now working in the new shaft of the Gray Eagle No. 2, which was begun last week. The shaft is down only a few feet, but a fine body of vein matter has been uncovered, which is widening and strengthening with depth. There is no ore in this vein matter, but it is identical with the vein matter that carries the highest values and the indications are becoming better that lead will be encountered in a short time.

A new tunnel has been started, to head for the Gray Eagle and the Morning Star shafts. This tunnel has been driven more than one foot a day since it was started. The tunnel is exceptionally wide and high and will be used as an outlet for the ores from the shafts.

Camp has been moved from the Morning Star shaft to a sheltered point near the Gray Eagle shaft. There, in an ideal location, a bunk house fourteen by twenty feet, with accommodations for twelve men has been built. The house is substantially constructed and will give the men a maximum of comfort during the winter months.

MONO COUNTY COPPER.

Very few there are who look upon Mono county as a copper producer, and yet the deposits of the red metal in this county and in close proximity to Bodie, are not only great, but are among the richest found in the West. Last week, in the office of the Secretary of State of Nevada, which is the first move to the development of our resources along that line, articles of incorporation have been filed for the Rainbow Cuprite Mining Company, having a capitalization of \$1,500,000. The corporation has mines in Topaz, Mono county, Cal. The subscribers to the stock are A. D. Bird of Topaz, James Miller and James T. Tydemann, both of Reno.

At Copper Peak and other points close to Bodie lie unmarked great bodies of rich copper ore, with stringers of native copper running through it. All that is needed is the assistance of capital and railroad to transport it. It is conceded by the best authorities on copper that the present price of the red metal will not long continue, as the demand exceeds the supply and its uses are increasing with such rapidity. It is the general belief that the price will go to 20 cents when the stock job there. Anyway just keep your eye on Mono county as a producer of the red metal in the near future, and we and take notice.—Bodie Miner.

COPPER KETTLE MINING DISTRICT

NEWLY DISCOVERED CAMP HAS LARGE MINERALIZED ZONE.

A. C. Fralick, writing for the Lovelock Tribune, says: I have recently visited the Copper Kettle Mining District and personally examined and sampled a number of properties in this newly discovered camp. The district, as now organized, comprises about eight miles square, extending four miles in each direction from a point near the mouth of Grimes Creek in the Silver Range of mountains, Churchill county, Nevada.

The principal mineral manifestations and discoveries are located along the base of the range and where a spur of the Humboldt range of mountains connects with the Silver range and extend in an almost unbroken chain along the entire range. It is about thirty miles east of Lovelock and reached by good wagon road.

The writer spent several days in the district and learns from Mr. Robert Welsh Jr., district recorder, that already there are some over 200 locations with representation work completed.

The apex of the Silver range is very similar to Cottonwood range in Humboldt county and is composed of Muscovite granite and belongs to the eocene period of the Tertiary era and evidently intruded through the Cambrian slates and old sedimentaries. In the vicinity and on the properties visited the prevailing formation is probably a dolomite lime and extensive porphyry dikes, which show the action of dynamic force and the agency producing the fractures for the disposition of ore bodies is evidenced by the igneous dikes following the line of contact.

The general course of the vein system is east and west, dipping to the north. The mineral belt is covered by a heavy cap of iron gossan. On the properties of Bunch & McIntyre, Green & Company, and White & Spray, the mineral showing is very pronounced and the petrological conditions almost identical with the great copper mines at Bisbee, Ariz., and indicate permanency, continuity and extremely high values in their downward course.

The generic agency which precipitated the ore is hydro-thermal action.

The general character of the ores are copper sulphides and some silicates, although in places red and black oxides, copper glance and copper pyrites are plentiful. On the Copper Mountain group, owned by Bunch, McIntyre and others, there are several ledges exposed, the extent of which is unknown, but seems unlimited, as the whole mountain contains ore wherever any depth is attained, which will make excellent concentrating propositions from present indications.

In one place an average sample of four feet in location hole gave an assay value of 43 per cent. Cu, \$3.30 gold, 8 ounces silver. Another sample, seven feet wide croppings, returned 6 per cent. Cu, \$8.20 gold, 3 ounces silver, and some selected ore from this group returned 71 per cent. copper, \$11.20 gold and 15 ounces silver. There is considerable lower grade ore on this property that runs from 2 per cent upwards in copper and also carries good values in gold and silver, but for surface ores the general character is an exceptionally high grade, some of which would pay to ship even at present conditions.

On the Freen claims south of Grimes Creek, in one group nature has exposed a ledge fully 50 feet in width for a distance of over 1200 feet, which shows in several places copper that assays over 50 per cent. He tells me that analysis of some of his ore, made in Los Angeles by his associates, gives a high percentage of tungsten. To the northeast about four miles, William White has a group of six claims upon which he is at present doing development work in the way of shafts and open cuts. Here is one of the most extensive surface croppings to be found anywhere. Lying between two distinct formations, lime and porphyry is a ledge fully 200 feet in width. A sample taken 125 feet across the croppings assayed 12 1/2 per cent copper, 1 ounce silver.

A number of samples from all the above mentioned properties and others in the district, which are now being tested will be given later. In conclusion, I will state I have absolute confidence in the outcome of this district as to its permanency and continuity. No depth has as yet been attained, but farther to the south about five miles, at White Cloud, the company which is operating there under the able and energetic management of Mr. J. Reid, is meeting with unparalleled success and are related with wonderful mineral deposits they are encountering in their deeper developments.

It adds to the fact that Nevada's treasure laden hills have been but scratched by the miner's pick. From every section comes a story of wealth of fortune, acquired by men who a few months ago were comparatively poor, today are numbered among our capitalists. This sudden change of fortune cannot in any way be attributed to mere chance. It is the well merited reward due to energy, push and perseverance and an abiding faith in the treasure laden hills of golden Nevada.

TALKS OF TECOPA.

Also Predicts Great Things for Keane Wonder.

R. M. Rogers of New York, who with Homer Wilson, has recently visited the Tecopa Consolidated and the Keane Wonder, speaks in the highest terms of the properties. To a Herald reporter, Mr. Rogers said:

"I went down and looked at the Tecopa properties from the Gunsight to the Noonday, and went all through the Noonday. The properties look to me like great propositions, and at the present output of ninety tons a day they will not be worked out in twenty years. Everything is in their favor. The railroad is only eighteen miles distant, with a down hill pull all the way. A ten-mule team hauls two wagons holding eight tons. The camp has an ideal location, close to the railroad. The man who holds a large interest in Tecopa Consolidated ought to be happy, and I guess there is one of them present who is wearing the smile that won't come off."

"I was down at the Keane Wonder," continued Mr. Rogers, "and saw the mine. I think that it will develop into one of the biggest mines in the country. A study of the situation seems to indicate that they can work 1000 feet in depth and then not reach the bottom of the values, and the deeper they go the richer the values are. I am going over next week to see the mill start, and will probably stay for the first clean up."

"This is a wonderful country to look at," continued Mr. Rogers, "in speaking of local conditions. It looks to me as if these eternal hills have not been scratched for the wealth they contain. Taking everything into consideration, it is astonishing what comforts one can obtain here. I am accustomed to all the comforts that New York can provide, but I have no kick coming on what I got here. And I am surprised to see how these desert chauffeurs cover the ground with these machines. Last night we came up from Ash Meadows, forty miles, in two hours, all in the dark, in Teddy Tetzlaff's car."

"I think that the men who go out into this country and find these properties and the men who put their money into them have lots of nerve and deserve to win. I think that men like Homer Wilson, who develop properties in what appears to be an inaccessible district and surmount the difficulties which appear to be almost beyond reach are deserving to win."

"The east has not begun to appreciate the mineral wealth of this state. As far as I can learn, most of the capital now developing these properties is local or western. I hope to see the east educated to a greater degree than at present regarding the business of mining."—Rhyolite Herald.

THE SEEN ABSENTEE.

The professor of English in one of our western colleges was noted for being very absent minded. It was his custom to call the roll each morning before the lecture. One morning after calling a name to which there was no response, he looked up and, peering over his spectacles, asked sharply:

"Who is the absent boy in the vacant chair I see before me?"—Lippincott's Magazine.

Journals, cash books and ledgers—just the thing the merchant needs—best that can be made. For sale at the Bonanza office.
